

Construction of electrical installations

Safety.Comfort.Quality

Construction of electrical installations

Our Clients are well aware of the risks related with undertaking investments when executing cost-saving projects. As a result, they look for solutions which will ensure them a guaranteed return on investment. Therefore, since 2016, Luxon has started developing services of electrical installation construction. Today, we provide comprehensive services as part of the implemented projects ensuring safety, comfort and quality.

Why us?

SAFETY.

Electrical construction services in Luxon LED – this means qualified specialists who can handle even the most difficult installations, whether it's performed at the height of 16 metres in a power plant or on active facilities. In relation to this, we maintain the highest standards of OHS in order to guarantee uninterrupted operation of a production plant. Safety of our crew and the Client's employees is our priority.

COMFORT.

Each project is supervised by an electrical work coordinator designated by Luxon. We start the supervision over the investment from preparing a design documentation, through periodic acceptance and verification of works performed by our crews, to the acceptance protocol and as-built documentation. When commissioning work to Luxon, the Client has a guarantee that the savings will be achieved in a timely manner. In turn, the Luxon service support guarantees that the cost-saving will be uninterrupted throughout the entire warranty period.

QUALITY.

The expertise and experience of our contractors and electrical work coordinator is the basis of the quality offered. We rely on branded components of European companies which meet European standards and are certified for the given work conditions as part of a given project.

Benefits

Benefits of relying on our services

Comprehensiveness

We offer a wide range of electrical construction services, from the preparation of a documentation, through the lighting installation, PV and even replacement of wiring and electrical cabinets in the entire facility.

Service Support

The basic packages covers annual checks and intervention electrical works. The full package includes repairs of particular lighting fixtures or damaged PV panels within 24 hours after reporting a defect, 7 days a week

Coordination

We offer a dedicated project coordinator who supervises the progress of investment. Coordination is based on a work schedule approved by the Client, thanks to this, the investor knows the entire process of the installation even before the investment starts.

One partner

The Client executes the entire project in cooperation with one company. Thanks to this solution, the Client saves time in processing the execution formally and has one company responsible for the entire work process from A to Z.

Control

Luxon LED is responsible for the supervision and work process related to the investment. Thanks to the cooperation with authorised electrical construction companies, we have full control over the safety, quality and time of the work performed by our crew.

Six steps towards a tailor-made installation

1. Audit

Discussion on the client's needs and the scope of works. We check the characteristics of a given facility, the condition of the electrical installation and we collect all the pre-implementation documentation.

2. Selection of a Partner

From among the available contracting companies from Central and Western Europe we select a contractor considering the geography, human resources, readiness to operate, and experience in order to meet all the criteria and needs of our Client.

3. Design of the installation works

The electrical installation coordinator from our company will prepare the investment for execution ensuring a delivery schedule and work schedule as well as full design and employee documentation.

4. Installation and coordination

Works in a facility are performed in accordance with the concept agreed with the investor, at the same time fulfilling all safety rules. Within the dates set together with the investor, we

conduct a quality control of the stages completed, documented in a report.

5. Documentation

After accepting and measuring the lighting, we provide the investor with protocols on the completion of works and prepare an as-built documentation.

6. Service support

We offer service support throughout the entire period of use, we conduct maintenance of the fixtures along with regular cleaning, periodical measurements of lighting, photovoltaic installation, we verify switchboards and the condition of the installations ensuring quick response time to the service notifications, even in the 24/7 mode.

Examples of our projects

Become our partner!

Are you a contractor? Do you identify with our process of electrical installation construction? If you answered both questions with yes, then we would like to invite you to contact us and join our authorised partners! Get in touch with us

Contact us

contractors@luxonled.eu

From the moment of learning about the offer and technology, we were convinced that one company, which produces its own products in Europe, takes us through the entire process.

Henning Strepkowski
Head of safety and maintenance
Theyson Formenbau

The entire lighting installation project lasted around a month. Luxon singled out with efficient installation works which did not interrupt our technological processes..

Roman Budny
Distribution Supervisor, Geberit
